Identify the sources of innovations: beyond R&D

R&D is not enough. Significant R&D spending might be necessary for some firms to develop new technologies but certainly does not guarantee their innovation success. **Identifying innovation opportunities** requires learning about new combinations of new or existing technologies with new or existing needs.

The **triggers of innovation opportunities** which firms should proactively exploit include internal sources such as new knowledge, challenging routines and serendipity, and external sources such as changes in markets, industry and environmental constraints.

Sizeable innovation opportunities do not pop up out of the blue. Organizations must invest time and resources to combine, integrate and **mature innovation ideas into potential opportunities**. They should also pursue already emerging opportunities and focus on scaling

them up.

Bibliography

R&D is not enough

Keywords: market pull, R&D as a source of innovation, technology, technology push
